Content Strategy & Automation Pipeline: Final Report

This report outlines the complete content strategy and automation pipeline for the AI robot content creator, "Bolt."

1. AI News Sources

A catalog of 15+ reliable AI news sources with RSS feeds has been compiled and is now managed in a separate configuration file for better maintainability.

Reference: `code/config.json`

2. Automated News Aggregation

A Python script has been developed to automate the process of fetching, filtering, and analyzing AI news. The script identifies trending topics and scores articles based on a quality metric. The script has been significantly improved to include:

- **Advanced Content Analysis:** Implemented TF-IDF for topic modeling and a multi-factor quality score for more accurate content selection.
- **Robust US-Content Filtering:** Re-implemented a more robust filtering mechanism for US-relevant content.
- **Improved Robustness and Maintainability:** Enhanced the script with comprehensive error handling and refactored it to load configuration from a separate JSON file.

Reference: `code/news_aggregator.py`

3. Script Templates

Script templates have been created for the four content pillars: News, Tools, Concepts, and Daily Life.

Reference: `docs/script_templates.md`

4. Content Calendar

A 30-day rotating content calendar has been designed with optimal posting schedules for YouTube Shorts, TikTok, and Instagram Reels.

Reference: `docs/content_calendar.md`

5. Platform-Specific Optimization

Platform-specific optimization strategies have been developed for YouTube Shorts, TikTok, and Instagram Reels, including hashtag strategies and content hooks.

Reference: `docs/optimization_strategies.md`

6. Content Quality Scoring and Trending Topic Identification

The conceptual design for the content quality scoring and trending topic identification system has now been fully implemented in the `news_aggregator.py` script.

Reference: `docs/quality_scoring_system.md` and `code/news_aggregator.py`

7. Research Plan

The entire project was guided by a comprehensive research plan, which can be found here:
